ROOM 11'S NEWS

LOOK WHAT'S BEEN HAPPENING ...

Sam's creation

Ships and drones!

There has been a lot of interest in drones and big ships! It has been an interesting journey watching the boys come up with some rather large container ships and then be able to tell everyone about it. On some occasions we had army ships with cargo and drones! We found out that drones are used for taking photos and videos and for looking at what is happening somewhere around us.

Marbles and cars!

What makes our marbles and cars go down?

The weather hasn't been too kind to us since the fourth term began, however this has not deterred us from some exciting learning experiences. One of our current interests is using the cardboard rolls and down pipes to make marble and car tracks. We have found out about gravity by doing this and why cars go fast or slow when we put them in the track. This works the same for marbles.

We are looking forward to being able to spend more time outside and using the pipes in a different way, for example running water in the sandpit and seeing what effect gravity has on water when we alter the heights of the pipes and hose.
